

Ibrahim Haykal Alatas

Full Stack Developer | Business Systems for Operations

+62-896-2806-6432 | ibrahimhaykal@gmail.com | linkedin.com/in/ibrahimhaykalalatas | ibrahimhaykal.my.id

SUMMARY

Full stack developer (Laravel, React, TypeScript, SQL) who builds the systems operations teams run on, with 16 months inside an Astra Otoparts manufacturing plant and current work on the CRM an actuarial consulting firm runs end to end. I start from how work actually flows, then build, ship, and measure: cut warehouse material search time by 76% (validated by time study), migrated a live plant system with zero downtime, and gave 6 divisions one real-time view of every client project. Looking for a business analyst, digital manufacturing, or supply chain systems role where software meets operations.

EXPERIENCE

Full Stack Developer

Jun. 2026 – Present

PT Data Teknologi Terintegrasi

Jakarta, Indonesia

- One of 6 engineers on the CRM an actuarial consulting firm runs end to end, from lead and pricing through calculation, review, final report, and billing. Used daily by 6 internal divisions and by clients since trial launch in September 2026.
- **Process visibility.** Mapped the firm's 18-stage client workflow into a live project board, giving every division one view of where each client sits, with work-in-progress limits per stage and ageing alerts that surface stalled work before deadlines slip.
- **Core deliverable.** Own the module the firm's billable PSAK 219 actuarial report comes out of. Moved draft review, revisions, and client sign-off out of email and chat into one tracked flow, and extended it to final report release and hardcopy delivery tracking.
- **Removing manual work.** Let analysts send Excel data straight to the calculation engine instead of re-keying it, shrinking a 36 MB file the engine rejected into tens of kilobytes. Delivered AI processing that turns prior-year reports into editable tables, removing a re-typing step for every returning client.
- **Control and decision data.** Enforced access by region and team on the server, so each manager sees only their own territory or pipeline (one account went from 22 other people's tasks to 0). Required a reason on every lost deal so management dashboards show why deals are lost, not just "Other".
- **Fixing what real users hit.** During trial, cut a 1,664-company directory from 17 chained requests to 1 and a key filter query from 930 ms to 205 ms, based on issues raised by daily users.

Full Stack Developer Intern

Feb. 2025 – Jun. 2026

PT Gemala Kempa Daya, Astra Otoparts Group

Jakarta, Indonesia

- **Warehouse digitisation.** Built the raw material warehouse system for 48 storage blocks and 400+ weekly transactions, with QR scanning at goods in and goods out. Cut operator search time for material by 76.10%, from 103 minutes to 25, measured by formal time study.
- **Supply and demand visibility.** Linked production demand to warehouse stock in a separate layer when the plant ERP could not be changed, and mapped 80+ finished goods rack positions with barcode tracking.
- **Cross-functional reporting.** Worked with Accounting and Quality Control to deliver inventory ageing and cost reports (30,000+ rows in about 9 seconds), scrap approval with audit trail, and maintenance response tracking.
- **Change without stopping the line.** Migrated the trucking control system to a new database in phases, running old and new side by side so the plant kept operating with zero downtime.

Web Developer

Aug. 2024 – Jan. 2025

Nirmala Technology

Jakarta, Indonesia

- Delivered client products for small businesses: a QR-based restaurant ordering system with online payment and an admin dashboard, plus a bilingual company profile site.

EDUCATION

Politeknik STMI Jakarta, Ministry of Industry

Sep. 2022 – Jul. 2026

Applied Bachelor of Computer Science, Industrial Automotive Information Systems; GPA: 3.77/4.00

Jakarta, Indonesia

- Thesis: Steel Sheet Monitoring Information System at PT Gemala Kempa Daya, validated by time study over 30 measurement cycles.

LEADERSHIP & ORGANISATION

HIMASIS, Information Systems Student Association

2023

Politeknik STMI Jakarta

Jakarta, Indonesia

- **Head of Events, cadre development program.** With the program lead, redesigned the rigid format I went through into "LevelUp: Lift Every Knowledge Through Leadership with Fun Experience". Around 70% of participants joined the association; several became division heads the next term.
- **Person in charge, Study Club.** Organised a peer learning program covering UI/UX, HTML, CSS, JavaScript, Bootstrap 5, SQL, and database design for first and second year students. In the post-program survey, 19 of 20 respondents said it helped them understand coding, average self-rated understanding was 3.9/5, and all 20 asked for it to run again.

PROJECTS & ACHIEVEMENTS

- **Hackathon 2025, 2nd place nationally:** small-business digital platform with WhatsApp chatbot integration.
- **AI Defect Detection System:** camera-based visual inspection for automotive parts, detecting surface defects in real time to support quality control.

SKILLS

Backend: Laravel 12, PHP, REST APIs, queued jobs, WebSockets/Pusher, JWT, JasperReports, API documentation

Frontend: React 19, TypeScript, Vite, Next.js, React Query, Tailwind CSS, Kotlin (Android)

Data: MySQL, PostgreSQL, Oracle PL/SQL, query optimisation, Excel automation, AI/LLM integration, zero-downtime migration

Operations: Process mapping, time study, warehouse and inventory systems, role-based access design, requirements from shop floor and finance users

Certification: BNSP Junior Web Developer, BNSP Database Administrator
